

Camera planning worksheet

Mark views, power and recording days before anyone counts cameras.

Views (tick and note distance)

- Front entry / doorbell line
- Driveway / cars
- Rear yard / side access
- Garage / carport
- Shed interior or eave
- Stable aisle / foaling box / arena
- Front gate after dark

Recording

Days of retention you actually need (motion vs continuous). Who reviews clips. Whether a UPS is worth it so the recorder survives a short outage.

Network

If a camera cannot reach a recorder or the internet it is just a box on a wall. Detached buildings usually need a wireless link or a trench — say which is realistic.
