

# Install-day preparation

Access, pets, ladders, power isolation and who needs to be home.

## Before we arrive

- Someone 18+ on site who can approve the mount position
- Pets contained — roofs and cable runs are not a place for dogs underfoot
- Clear access to the roof, fascia, meter box / data cabinet and the indoor router location
- Starlink kit on site if you are supplying it, still in the box if possible
- Wi-Fi password and Starlink account login available for handover

## We bring

Ladders, heights practice, cabling consumables, labelling. Mains electrical work is separately scoped with a licensed electrician if a new circuit is required.

## Handover

You should leave knowing how the system is powered, isolated, and how to check the app. If that did not happen, say so before we drive off.
