

Whole-property Wi-Fi checklist

A one-page walkthrough of house, shed, stable, gate and power.

Mark on a sketch or the online planner

- House / internet source
- Shed, workshop, stable, granny flat, arena, gate
- Approximate distances (the planner measures them)
- Trees or hills between buildings

Power

Is there a power point at each building you want covered? Is the shed on the same switchboard? Do you want a UPS on the router and recorder?

Who uses what

Work from home, cameras, guests, machinery telemetry, kids on the back verandah — say so. Traffic types change the design.

Existing kit

NBN, OptiComm, Starlink already on site, mesh nodes, a data cabinet, CCTV that must stay. Photos of the rack save a conversation.
