

Starlink installation guide

Sky view, mount type, cable entry and router placement decide whether the kit works on day one and still looks tidy in two years.

1. Sky view

Use the Starlink app obstruction tool on the roof or the proposed tripod position — not from the backyard. Trees, neighbouring two-storey homes and the roof itself all count.

2. Mount types we actually use

- Fascia / wall — often cleanest on new estates
- Tripod / non-penetrating — flat roofs, rentals, coastal presentation
- Roof / ridge — when that is the only honest sky view

3. Cable entry

Agree the route before a hole is made. Seal, strain-relief and an accessible indoor termination. The weak point on DIY jobs is almost always the penetration.

4. Router placement

Central, ventilated, not in a metal cabinet or a low cupboard. If the house is brick and two-storey, plan mesh or a second access point rather than hoping.

5. What VINCONNECT prices

Installation labour. Starlink hardware, mounts you supply or we itemise, and the monthly plan stay on your Starlink account. Confirm current offers at checkout.
